INTRODUCING...

X4D MOTION EFX CINEMA SEATS

FEEL THE MOTION...FEEL THE EXPERIENCE!

X4D Motion EFX seats provide a completely immersive 4D/5D theater experience as the modular seats move to the exact movement on the screen with 2 degrees of freedom (forward, back and side tilt). Built-in effects, such as seat transducers, back pokers, leg ticklers, water blasts and atmospheric effects like wind, rain, snow, bubbles, fog, strobing and even scent, can add a 5th dimension to the movie-going experience.

WHY CHOOSE X4D MOTION EFX CINEMA SEATS?

Utilizing a distributed power unit, our patent-pending drive method greatly reduces the cost of equipment, installation and maintenance.

Our "open system" motion is driven from a small computer system that syncs up to your digital cinema server and projection system. No embedding.

MediaMation's expert programmers, utilizing our award-winning ShowFlow™ software, partner with content providers and studios in creating the perfect "motion" picture experience.

MediaMation Inc., a U.S.-based privately-owned company, has over 20 years experience in designing, manufacturing and programming 4D/5D theaters, interactive technology and systems integration.

X4D Cinema Seats come in various fabrics and can be custom designed to fit any theater environment.

Customize your X4D experience with additional seat effects or transform an entire theater with atmospheric effects to create a totally immersive and completely unique experience.
